

ICP.19.R1.87
Version 87
Internal Release Note

Report created at: 31/01/2019 10:17:43 PM

Notes / Special Instructions:

This release contains the following items:

Jira Ref	Service Now Ref	Type	Title	Description
D10-104	LOGGED INTERNALLY	New Feature	Filing: New Born Baby Notification	A notification is now displayed when a document is received for a new born baby (< 3months old). This feature has been implemented to reduce the amount of baby's documents that are rejected because of them not having an NHS number yet
D10-488	LOGGED INTERNALLY	Change	Carenotes: sync - control retries after failure	In the event the API errors due to data quality or duplicates the sync service will no longer attempt to retry
D10-637 D10-638	LOGGED INTERNALLY	New Feature	RMS ONLY: Barndoc - Add additional User Fields	Additional User Fields have been added to support the Barndoc reporting requirements
D10-639	LOGGED INTERNALLY	New Feature	RMS ONLY: Barndoc - Add RMS section to Task Templates with several options	Additional fields have been added to the task templates to support the Barndoc reporting requirements
D10-716	LOGGED INTERNALLY	Change	RMS ONLY: eRS Worklist filtering (connection issue)	A site can now be configured to collect from certain specialities, instead of the download checking all documents for every speciality
D10-752	LOGGED INTERNALLY	Change	Tech Debt: Create a tool for encrypting secrets	A tool has now been created that generates encrypted secrets at a command prompt using the Public Key of the RSA key container. This was created so that support staff can encrypt strings without needing access to the private key of the RSA key container. E.g. to create an encrypted version of a new database password
D10-754	LOGGED INTERNALLY	Change	Carenotes: Patient Update Poller - Remove NHS Number check	Previously when the Patient Update Poller was performed, it performed a check to see if the NHS Number is valid. This has been removed in line with changes to the Docman API
