External Release Note
GP/SC.19.R1.84 (Version 84)

docman
delivering paper free care

Notes / Special Instructions:

This release contains the following work items:

Work Item Type	Title	Description
Bug	Message board – latest edited date wasn't being refreshed after message board was edited	We have fixed this issue and the Edit date is now updated without the need to refresh the landing page.
Bug	System error generated when changing category of a discussion	This has now been fixed and users can select a category of a discussion with no issues.
Change	Disable autofill on Docman Quicksearch	We have turned off the caching in the Quicksearch that was showing previous searches as a pop up. This has been done to improve security.
Change	Carenotes Integration – User shown Docman homepage before re-direct	Users will now be taken to a redirect page, rather than the landing page when using Single Sign On (SSO) with Carenotes and RMS.
Bug	Error message when editing Contractual Relationship in user details Service Now Ref: DFCT0011139	We have fixed an issue that saw an error being presented when creating a new user and adding any data within the Contractual Relationship section.
Bug	Task Tracker Completed dates are incorrect Service Now Ref: DFCT0011128	We have fixed an issue with the Task Tracker report that was causing the 'Completed' date to be incorrect.

Change	Carenotes Integration: Removing date of death to re-activate patient in RMS through the API	As 'Date of Death' is not a field in Carenotes we originally removed this option. We've now added a change to make sure we re-activate this date of death in Docman RMS.
Change	Carenotes: Synchronisation: Control retrys after failure	In the event the API errors due to data quality or duplicates, we've changed it so the synchronisation service does not attempt a re-try as the same response will occur.
Bug	Carenotes Integration: Phone numbers are not synchronized from Carenotes	We have fixed an issue where patients telecoms information was not being synced correctly by the sync service.
Change	Desktop App : The Filing Queue banner covers the 'Save Document' button	We have moved the filing queue button so it no longer gets in the way of the 'Save' button or 'Create Review' button. This will allow users to continue working while the document is being filed to the clinical system.
Bug	Intermittent loss of connection between Desktop App and Web App	The connection issue has been resolved between the two.
Bug	Error in Connect Console when creating Database Host	We have rectified an issue that was failing to save additional Database Hosts in Admin.
Change	eRS – Option to merge attachments to current document	In order to go live with our FOT for eRS, we have made some changes to the functionality of eRS documents in Docman so that attachments can be merged into the current document, permitting they have a readable file type.
