

Connect 102

Release Notes

Report created at: 27/08/2019 12:00:00

Notes / Special Instructions: N/A

This release contains the following items:

JIRA ID	ServiceNow Ref	Type	Title	Description
D10-1638	DFCT0011265	Defect	Issue with Connect printer keys	<p>When generating a printer key from the Connect console, if the user role name exceeded a certain amount of characters then the Connect UI would push the print key to the right, this meant the last character of the key were missing. This has now been fixed and the full printer key is now viewable in these situations.</p> <p>Screenshot 1: Printer key</p>
D10-1555	N/A	Bug	Merge failures are setting documents to Rejected rather than System Error	<p>When MergeProcessor fails to merge a document, it sets the ServiceStatus to Rejected rather than SystemError. As there is no Sender user to deal with the Rejection a change has been made to use SystemError status.</p>
D10-1419	N/A	Bug	Application Cache takes you back to landing page when cleared	<p>After clearing the application Cache it would take you to the landing page rather than staying on the current page. This has now been resolved and will no longer take the user to the landing page.</p>
D10-1670	N/A	Change	TPP documents – Add configurable document limit	<p>A configurable document size limit has been added for any TPP documents processing through Connect. This is to ensure that documents are rejected back to the sender if the documents exceed the configured limit and the sender is notified in a timely fashion.</p>
D10-1811	Internally raised	Defect	Release 99 – Unable to reject system errored documents	<p>An issue was found when releasing Connect 99, when attempting to reject a system error document with any rejection reason the webpage would refresh but the document would remain in the previous state. A fix has been rolled out to 99 which resolves this issue.</p>
