

Connect 106

Release Notes

Report created at: 23/10/2019 13:00:00

Notes / Special Instructions: N/A

This release contains the following items:

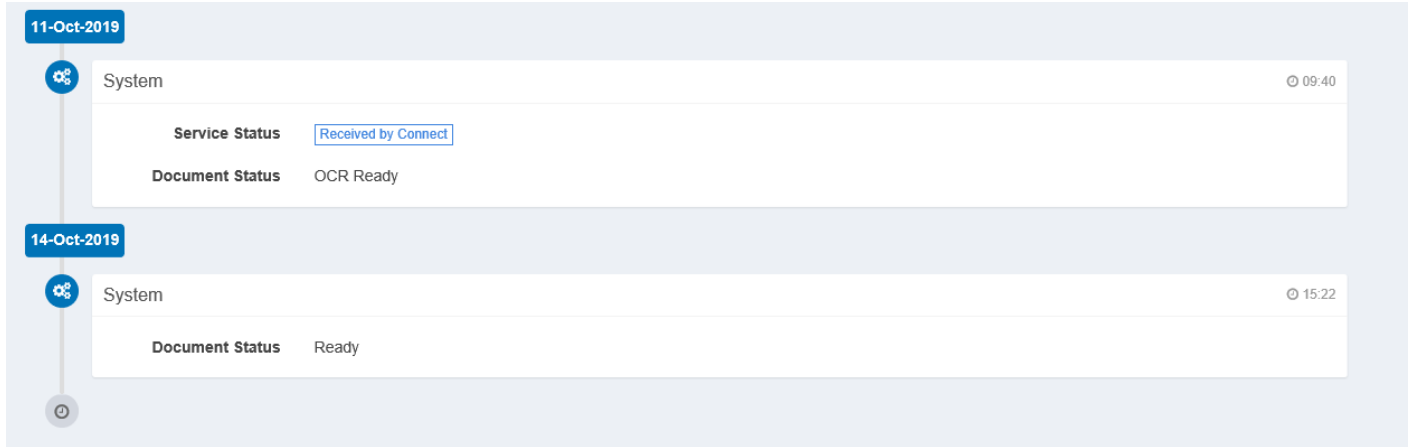

JIRA ID	ServiceNow Ref	Type	Title	Description
D10-1919	N/A	New Feature	Capture e-discharge: Populate required data lists & validation	As part of the Sending FHIR to MESH practices project, the 'Capture e-discharge' page has now been created however, data lists and validation was not present. We have now added all data into the data lists and validation against all relevant fields within the 'Capture e-discharge' page.
D10-1923	N/A	New Feature	Capture e-discharge/MH discharge: Post document	As part of the Sending FHIR to MESH practices project, the 'Post Document' feature allows the user to post the transfer of care documents to the destination endpoints.
D10-2099	DFCT0011296	Defect	Document Timeline Incorrectly Recording OCR Date and Times	Included in 104 hotfix. When viewing the document timelines documents were showing the OCR audit with a date and time of 0001-01-01 00:00. This issue was caused by an incorrect query attempting to pull the timestamp back from the database. The query has now been amended and the audits/timeline should now look correct. Screenshot 1: OCR Date
D10-2100	N/A	Bug	NHS mail password validation changes	Included in 104 hotfix. NHS mail have enforced a new password validation process and now allows special characters to be used. Due to this change rather than matching the same password validation, all validation has now been removed. This will stop Connect being at fault when an NHS mail password fails and instead will rely on NHS mail to validate the passwords used in Connect.
D10-2145	DFCT0011306	Defect	Issue filing documents	The following error occurred when attempting to send certain documents via the Capture Console "Delivery Console error occurred while resending the

				selected document". This occurred when sending new documents rather than resending an existing document. A fix has now been applied and all documents can now be posted via the Capture console once again.
D10-2185	N/A	Bug	Spine check when certificate is not configured	Included in 104 hotfix. The spine check functionality was being used by default for all sending organisation even though not all organisations had SMS enabled. This has now been resolved and the Spine check will only take place once an organisation has the functionality enabled.
D10-2191	DFCT0011303	Defect	Source user not being populated on sent documents	When sending documents through the capture console, the 'Source User' field was not automatically being populated. This meant that this field was blank and was failing validation stopping users from sending documents. A fix is now in place which will populate the 'Source User' field as expected. Screenshot 2: Source User
D10-2195	N/A	Bug	Spine check on Non-Spine organisations	When sending using the console, organisations that were not configured to use the Spine mini service were getting suggested endpoints found by the Spine. These checks should not have been present and a fix has now been provided that will only enable Spine checks if the organisation is configured to do so.
D10-2222	N/A	New Feature	Capture e-discharge/mh-discharge: Ability to choose Encounter Type	When completing a TOC document the user is required to choose an encounter type. This item adds the functionality to select an encounter type from a prepopulated list.
D10-2234	N/A	Defect	Unable to reset passwords from Internet Connect	When trying to reset an internet connect user password an error occurred, this was because the initial password was created using N3 Connect which uses different keys to encrypt and decrypt. A change has now been made to use the correct keys for both N3 and Internet Connect.
D10-2262	N/A	Defect	OOA Collector waiting due to some XML docs containing invalid characters	The OOA collector was crashing and after investigation we discovered that some documents being sent from the managed hub contained an invalid character that which stopped the documents from being downloaded. A change was made to reject documents

				back to the customer if invalid characters are used.
