

Connect 115

Release Notes

Report created: 13/02/2020 11:00:00

Notes / Special Instructions: This release and previous releases may include new feature work for FHIR. Although work was complete, the ability to send FHIR is not yet available.

This release contains the following items:

JIRA ID	ServiceNow Ref	Type	Title	Description
D10-2507	N/A	Defect	SUPPORT: One or more errors occurred	A number of errors were identified by support which contained minimal information making it hard for the support teams to identify the root cause. These errors have now been investigated and now contain error log IDs on the relevant document which will allow the support teams to explore further into the root cause making it easier and more efficient to manage errored documents.
D10-2607	N/A	Change	change workflow ID from EC to IP	A change was made to amend workflow ID from EC to IP when sending e-discharge documents to MESH.
D10-2748	N/A	Defect	DMC Connect Bot - Auto Errored DM7 documents being set to Update Hub Status	When auto-errored DM7 documents that have not been delivered after 5 days, the status of 'errored' is not being passed back to the EDT Hubs. This is because the EDT Hub product has no concept of 'Errored' status. An amendment has been made so that this status is no longer attempted to be passed back to any Hubs.
D10-2765	N/A	Change	FHIR - TOC Diagnosis description removal	A change has been made to the FHIR TOC document creation. Diagnosis description is no longer a free text field as when selection a SNOMED code, this will contain the description needed.
D10-2920	N/A	Bug	114 Hotfix - Tif Conversion updating page layout unnecessarily for all text, html & word docs	A fix was applied in a previous patch which resolved an issue with an RTF document. This fix didn't restrict the change to RTF documents only resulting in TXT,HTML, DOC & DOCX formatting issues when passing through conversion. This has now been amended to RFT file

				formats only resolving the formatting issues for text, html and word documents.
D10-2837	N/A	Defect	114 Hotfix - AWS MySql - Slow query in connect bot	Due to the change of databases, the new DB is handling DB queries differently which is affecting performance. A force index has been applied at code level to mitigate the current performance issue identified.
