# Connect 118
# Release Notes

**Report created:** 01/04/2020 11:00:00

**docman**
delivering paper free care
an ▲advanced company

---

**Notes / Special Instructions:  n/a**.

This release contains the following items:

| JIRA ID | ServiceNow Ref | Type | Title | Description |
|---|---|---|---|---|
| D10-3111 | N/A | Defect | 117 - Hotfix - Docman Connect Bulk Resend stopped working | PCTI users found that the bulk resend on system errored documents was producing a white page instead of resending the documents. After investigation we found that a previous change to the user role caused the issue. This has now been fixed and the bulk resend functionality is working once again. |
| D10-3106 | DFCT0011440 | Defect | 117 – Hotfix - Organisations being incorrectly identified as inactive | A new flag was added onto organisations to prevent sending through connect even when the DM10 site is still active. This was causing an issue due to DM10 sites on General incorrectly caching the value. This feature has temporarily been removed until all sites have been moved onto across. |
| D10-3021 | CHG0001523 | New Feature | Implement MRN numbers | A new feature has been added to Connect which will allow users to specify an MRN number when posting a document via the API or the console (This is an optional field). This can be added to the document modal using: Example: "MrnNumber": "32453" |
| D10-2564 | CHG0001560 | Change | Make 'Person' field available on the exported document List | On the document export from the documents list, 'Person' will now be included to help with sender reporting. |
| D10-1871 | CHG0001467 | Change | Patient name column for collection console users | When logged in as a collection user, users will now see a 'Patient Name' column in the list of documents. |
