

Connect 119

Release Notes

Report created: 20/04/2020 12:00:00

Notes / Special Instructions: n/a.

This release contains the following items:

| JIRA ID | ServiceNow Ref | Type | Title | Description |
|----------|----------------|--------|--|--|
| D10-2378 | NA | Bug | Consumers page Org Code column aligned to the right | On the organisations page on the Connect console, the Org code values were aligned to the right rather than the left. This has now been changed so that all values area aligned to the left. |
| D10-2802 | NA | Bug | DMC Console - Sending documents above TPP limit shows the limit size too large | When sending a document that was too big to go to MESH TPP sites a message was shown stating the file exceeds 'x' KB. This takes the byte amount in the system configuration and times' it by 10, showing a much large file size. This has now been changed so that the true document size is presented. |
| D10-2811 | NA | Bug | DMC Console - Selecting 'non' filter does not clear filters | Selecting the 'none' filter on document list did not clear the filter to show everything, instead keeping it use to keep the previous filter. A fix has now been provided and the filters are now cleared when selecting 'none'. |
| D10-2816 | NA | Bug | DMC Consumers - No partial search on description for PCTI users | If searching for consumers, the full description was required for any filtered results to be presented. This has been changed so that partial search will now show the relevant results. |
| D10-3148 | DFCT0011442 | Defect | Unable to change collection HUB when editing collections in connect | When setting up a collection, when trying to change the collecting hub it showed a list of GP practices instead of a selection of available hubs. This has now been fixed so that a list of Hub is now shown instead of practices. |
