

# Connect 120.1

## Release Notes

Report created: 19/05/2020 15:10:00

**Notes / Special Instructions:** This release is a hotfix

This release contains the following items:

| JIRA ID  | Salesforce Reference | Type   | Title                       | Description                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------|----------------------|--------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| D10-3346 | Internally Raised    | Defect | Connect API documents blank | When a non-html document was posted via the Connect API, the documents would show blank when using the preview panes. This was the same when these documents reached the endpoints. This was caused by a small change made to the API which should have only affected html documents sent from Carenotes. A fix has now been provided which amends the initial change to only affect Carenotes html documents. |
