Connect 128
Release Notes

Report created: 20/08/2020 09:28:00

docman
delivering paper free care
an **advanced** company

Notes:

Although this release and future releases may contain work related to FHIR Transfer of Care, this functionality is not yet currently available.

This release contains the following items:

API

JIRA ID	SF/Ideas Ref	Type	Title	Description
DCMC-207	N/A	Bug	DC02 response for all non DM10 Destinations Organisation Types	An issue was found when sending via the API to non DM10 destination organisations, users received a DC02 response. This was due to a change to the Connect active functionality and has now been changed so that non DM10 destination types use the Active flag instead of Connect Active flag.

Console

JIRA ID	SF/Ideas Ref	Type	Title	Description
DCMC-162	21757813	Defect	Document Export states a maximum export of 500,000 rows but only exports 50,000	A defect was found when using the document export functionality in Connect. The console states an export of 500,000 documents however only exported 50,000. This was a typo and has now been amended to 50,000 documents.
DCMC-177	N/A	Change	Update and Resend capturing incorrect data	An issue was identified when sending users used the update and resend functionality, where rather than picking up the metadata originally used upon sending via the API, the documents were instead being passed through the OCR processor and using the OCR data. This has now been changed so that API documents always use the original metadata upon updating and resending.

Infrastructure

JIRA ID	SF/Ideas Ref	Type	Title	Description
DCMC-199	N/A	Task	Automation Scripting	Placeholder for automation scripting.
DCMC-201	N/A	Task	Automation Regression Testing	Placeholder for automation testing.
