Connect 131
Release Notes

docman
delivering paper free care
an **advanced** company

Report created: 15/10/2020 09:00:00

Notes:

Although this release and future releases may contain work related to FHIR Transfer of Care, this functionality is not yet currently available.

This release contains the following items:

API

JIRA ID	SF/Ideas Ref	Type	Title	Description
N/A	N/A	N/A	N/A	N/A

Console

JIRA ID	SF/Ideas Ref	Type	Title	Description
DCMC-164	DFCT0011304	Defect	Documents in multiple tabs will all display the same Document Preview	When opening and viewing multiple documents on multiple browser tabs, the document preview on all tabs displayed the first document shown on the first tab. This issue caused a mismatch of metadata when switching between the document preview and metadata. A fix has now been applied which solves this issue.
DCMC-268	N/A	Bug	TOC Console Documents - Org search using ConnectActive to filter all Org Types	When sending TOC documents using the new FHIR service the ConnectActive setting was being used to filter available destination organisations, however it should only use this to filter DM10 orgs. This meant any non-DM10 orgs needed to be ConnectActive to be found as a destination org.
DCMC -273	DICP-|-137	Change	DMC | 4 | Allow filtering Document List by ClinicalProvider	PCTI users will now find the option to filter by clinical provider in the documents list allowing admin users to easily identify issues with MESH and destination organisations.

Infrastructure

JIRA ID	SF/Ideas Ref	Type	Title	Description
DCMC-262	DSC-|-18	Change	Urgent Marker displayed on documents coming from Urgent NHS Mail Inbox	A change has been made to the way NHS mail documents are collected and now look for urgent emails. When an email is identified an urgent flag is set against the document and passed across to DM10

				which will display an urgent marker for the end user.
DCMC-278	N/A	Change	Bulk user upload issue with not sending emails to users	A small change has been made to the bulk user upload process and now sends new user emails to all users included in a bulk user upload. This means users no longer have to run a bulk upload and then manually send the new user emails.
DCMC-304	N/A	Task	SonarQube Tech Debt	Placeholder for technical efficiency/technical debt work.
DCMC-298	N/A	Task	Automation Scripting	Placeholder for automation scripting.
