

Connect 96

Release Notes

Report created at: 06/06/2019 11:04:00 AM

Notes / Special Instructions: N/A

This release contains the following items:

JIRA ID	ServiceNow Ref	Type	Title	Description
D10-1221	INTERNALLY LOGGED	Bug	Slow filtering on Documents List	When filtering on the document list for specific Service Status and Information, the page would be slow to load the results. This issue occurred when the number of items returned is equal to less than the current items per page setting. Filter now works as intended.
D10-1276	INTERNALLY LOGGED	Bug	Collection Console – Rejecting Documents	When a collection user selected a rejection reason and closed the popup window, when selecting a new document the same rejection reason would appear instead of the default option "Select Rejection Reason". An amendment has now been made and the default option will now appear for all documents.
D10-1281	INTERNALLY LOGGED	Bug	Console Configuration - Unable to save configuration with blank job server password	When trying to save a configuration from the connect console when no job server password is present, an error would occur causing a blank page. This no longer occurs and will now allow the configuration to be saved.
D10-1283 D10-1284 D10-1285 D10-1286	INTERNALLY LOGGED	New Feature	DMC - Docman 7 Collection Enhancements	A new feature has been added to Connect that will allow DM7 NHS mail collections to run from the centralised Connect service. This will mean Connect will handle the collection of the documents from the NHS mailbox, the delivery of the documents to Scheduler and finally NHS mail password management. The password management will allow practices to update their NHS mail password from a URL sent via email to the practices/organisations primary email address.
D10-1300	INTERNALLY LOGGED	Bug	Error when navigating from Change password page	An error was thrown when navigating from the change password page to another page. A fix has now created and the redirect error will no longer occur.

D10-1303	LOGGED BY CUSTOMER	Change	.XX2 Extension Support	When EMIS and vision documents are emailed between systems, they are exported with an xx2 or xxx file extensions. An issue was found that 1 in 4 documents were failing conversion due to these file extensions. In order to prevent these issue from occurring we have enabled the removal of the xx2 or xxx file extensions when receiving document prefixed with an extension that we support (TIF,PDF,RTF,DOC,DOCX etc.).
