

# Connect 97

## Release Notes

Report created at: 19/06/2019 10:00:00 AM

**Notes / Special Instructions:** N/A

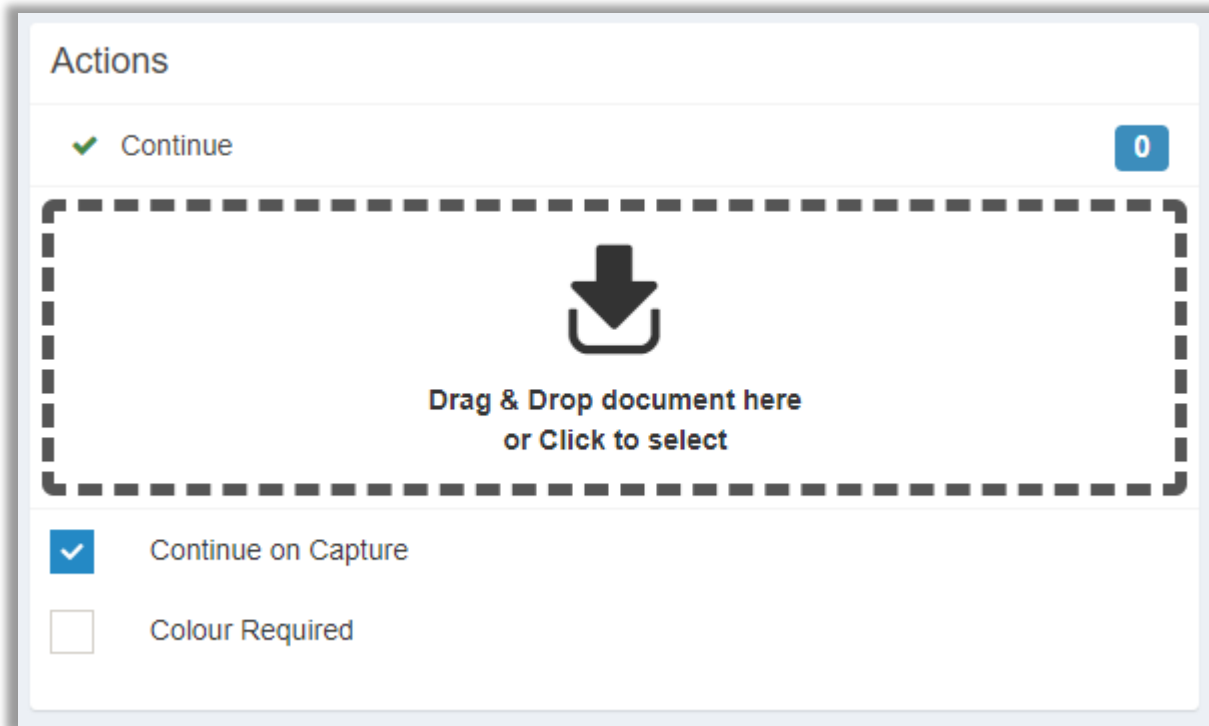

This release contains the following items:

JIRA ID	ServiceNow Ref	Type	Title	Description
D10-1352	n/a	Bug	EMIS Patient Mismatch	An issue was found where a handful of documents sent to EMIS practices were causing patient mismatch issues. After further internal investigation, we found that the event date and birth date were not forwarded on when the documents left the Connect service. This issue is now fixed and all data is passed across to the endpoint upon delivery.
D10-1216	n/a	New Feature	Capture Console – Drag & Drop	Customers moving from the EDT Hub product to Connect will have noticed that the drag and drop functionality in the capture console did not exist for Connect. Due to popular demand, we have now added the drag and drop feature. <a href="#">Screenshot 1: Drag &amp; Drop</a>
D10-1229	n/a	Change request	User export – user groups and document counts	A request was raised for the user export to include user groups as well as the document count for each user. An amendment has now been made to return this data upon exporting from the user list. <a href="#">Screenshot 2: User export</a>
D10-1321	n/a	Internally Logged	Auto-reject undelivered DM7 documents	In order to improve the delivery of documents to Docman 7 endpoints sent via the OOA service, we previously added an auto-rejection function to reject any DM7 documents sat in received status for 3 days. To improve this functionality further these documents will now be rejected using the normal OOA rejections reasons.
D10-1322	n/a	Internally Logged	Dashboard Alert "Error older than 24 hours" to include archived errors	An amendment has now been made to the dashboard alerts so that the "Errors older than 24 hours" to now include any errors that are older than 24 hours and have been archived.

D10-1330	CHG0001369	Customer Logged	Bit rate with colour conversion	After conversion documents in colour were not showing true colour, this was due to the bits-per-pixel being capped at 4. An amendment has now been made to allow 32 bits-per-pixel.
D10-1388	n/a	Internally Logged	Altering Mesh Expired Docs from "Errored" to "Rejected"	The wording when expiring mesh documents older than 5 days was confusing for some users. To avoid ambiguity the wording and status will be changed, from errored and "no update after 5 days" to rejected and "no acknowledgement received for over 5 days". <a href="#">Screenshot 3: Altering MESH</a>

**Screenshots/Test Evidence: N/A**
