Connect 99
Release Notes

Report created at: 18/07/2019 15:00:00

Notes / Special Instructions: N/A

This release contains the following items:

JIRA ID	ServiceNow Ref	Type	Title	Description
D10-1402	N/A	Internal Request	Add Rejection reason "CONNECT - Unable to deliver document"	As a PCTI admin user there are sometimes documents in "system errored" state that need to be rejected back to sender that the current 2 reasons (Conversion failed, endpoint not available) don't cover. For example, document that fail to be collected by scheduler 3 times. A new rejection reason of "CONNECT – Unable to deliver document " has been added to notify senders that Connect is unable to deliver the document to the destination and it's down to the sender to decide on whether to resend or send via an alternative method. Screenshot 1: Rejection Reason
D10-1421	N/A	Bug	Dashboard - Unable to filter on DM10 Connect Sending sites as Source Organisation	When using the PCTI dashboard we found that you were unable to filter the Source Organisation on the sending DM10 organisations. A change has now been applied to allow this functionality.
D10-1444	N/A	Defect	MESH System Errors not linking to Error	When attempting to view the linked error for MESH system error documents, the console failed to parse the error and an exception was thrown. A fix has been applied to link the user back to the correct errors related to the system errored documents.
D10-1498	N/A	Internal Request	Splitting of all ConnectBot conversion processor functions	To increase the reliability and reduce bottle-necking in the Connect service we have split up all ConnectBot conversion processes which includes OCR, TIF Conversion, PDF Conversion and Merging.
D10-1526	N/A	Defect	Mesh TPP ITK Acknowledgement being sent in response to wrong message	When sending a document to TPP via MESH we should be sending an Infrastructure acknowledgement back in return to TPP's Business acknowledgement of which we previously

				we not doing. We have now amended the this and both TPP and Advanced are receiving the correct acknowledgements.

Screenshots/Test Evidence: N/A
