Overview.....	1
API Changes	2
Console Changes	3
General changes.....	4

Overview

This release contains sprints 135 and 136. A new API call has been added in this release which allows API senders to call and return a list of endpoints along with their active status. Several defect fixes have also been included which rectify any recent issues around NHS mail collections.

API Changes

This release contains the following API specific changes:

Jira ID	Salesforce / Service Now Ref	Type	Title	Description
DCMC-387	N/A	New Feature	API call to return list of endpoints and status	A new API call has been added to the Connect REST API. This API call will initially return a full list of receiving organisations along with the active status, any calls after this will return a list of any endpoints that have changed status within the parameters provided along with their active status.
DCMC-416	21862536	Defect	DM7 Endpoints are coming back via the API as inactive when the 'ConnectActive' status is not ticked but we are unable to make active on console	A defect was identified where a handful of Docman 7 endpoints were returning an inactive 'ConnectActive' status which prevented the sending of documents to these sites. This issue was caused by a logic issue for destination organisations where all receiving organisations were using the 'ConnectActive' setting. Further logic has now been added to force only DM10 organisations to use the 'ConnectActive' setting, all other destinations now only use the 'Active' setting.

Console Changes

This release contains the following Connect Console specific changes:

Jira ID	Salesforce / Service Now Ref	Type	Title	Description
DCMC-429	N/A	Bug	Sending user unable to post document from console, it is taking to blank page.	A bug was found in our pre-production environment during sprint where sending users would receive a blank page upon sending a document using the Console. A fix has been applied and fixed before Connect 136 release.
DCMC-430	21888103	Defect	Document preview is showing as a half screen	When trying to send a document on the capture console, the document preview was showing in a small window which prevented preview of all document data. A hotfix for Connect 134 was created which stopped this particular UI issue from occurring.

General changes

The following changes have been made to internal functionality:

Jira ID	Salesforce / Service Now Ref	Type	Title	Description
DCMC-252	N/A	New Feature	FHIR Service - QA Testing	Placeholder for FHIR service testing. Issue identified under DCMC-250. FHIR testing still in progress.
DCMC-372	N/A	Task	SQS - Data retrieval setup	The SQS project relies on data within the Connect/Central database and the Connect API. This task was created to identify a way to push data in to Central and access the API to retrieve data.
DCMC-402	N/A	Task	DCMC regression testing for sprint 134 release manual	Placeholder for regression testing.
DCMC-397	N/A	Task	Automation Task	Placeholder for automation testing.
DCMC-431	N/A	Task	PEPR SwaggerHub Definition Clean up	The initial API definitions have been created in SwaggerHub, this task is to clean-up any issues raised by SwaggerHub.
DCMC-436	N/A	Task	Regression testing for 135	Placeholder for regression testing.
DCMC-438	N/A	Task	DCMC Regression testing for DCMC-430 hot fix in 2.134.0-beta.1+12	Placeholder for regression testing.
DCMC-441	21904483	Defect	When NHS Mail documents have failed TIF Convert, Audits are not updating, and Documents remain in Process folder in NHSM	A defect was raised related to NHS mail collections where emails were not being moved to the 'DocmanExceptions' folder after encountering an error. This was caused by a new field being added to the DocumentCollections model which caused an automapper error. This prevented the email from being moved to the exceptions folder but the Connect service status was still updated. This has now been resolved and the updated field is now accounted, preventing any further emails/documents from reaching this specific scenario.

DCMC-444	N/A	Story	Reprocess NHS Mail Exception emails	In order to make it easy for end users to identify any emails affected by the above defect (DCMC-441), a tool was created that identified any emails related to Connect documents with a service status of 6000, document status of 61 and source type of 22. The tool also created a new folder (UrgentExceptions) in any affected mailbox and moved the emails to this new folder. As part of this move a audit entry was added to Connect for the affected documents which specified whether the document had been successful moved or not. This also created a log file which included any document ids affected and the results of the folder move.
DCMC-445	N/A	Defect	Unique IDs have ran out on ConnectAudit table	The ConnectAudit table ran out of unique identifiers which prevented documents from being added. A change was made to the database which increased the number of unique IDs for this table.
DCMC-446	N/A	Task	DCMC Regression Testing for DCMC-441 hot fix	Placeholder for regression testing.
