Overview	1
API Changes	2
Console Changes	3
General changes	4

Overview

This release contains sprints 142 and 143 and includes the following:

- Bugs related to FHIR accreditation.
- FHIR testing tasks.
- The ability to resend DM7 documents to MESH destination organisations.
- Improvements to system errors.

API Changes

This release contains the following API specific changes:

Jira ID	Salesforce Ref	Type	Title	Description
DCMC-719	N/A	Bug	FHIR Accreditation Rx_Invalid_ITK_Response	When we receive an invalid ITK response, instead of causing an exception, we should generate a negative ITK response back to test harness. This change has now been applied.
DCMC-720	N/A	Bug	FHIR Accreditation Tx_Positive_ITK_Response	Errors were occurring when sending positive ITK responses due to the mapping model. A change has been made so the MESH sender lambda sends the ITK responses successfully to the test harness.

Console Changes

This release contains the following Connect Console specific changes:

Jira ID	Salesforce Ref	Type	Title	Description
DCMC-447	21910030	Defect	Docman Delivery Console - Letterbox Mode	We recently had a problem with viewing documents in the Delivery Console, they appeared as in a letterbox mode. This was fixed in the reported locations however the same issue was identified in the "Actions > View" dropdown. This has also been fixed and the document preview now shows the full document instead of the letterbox view.
DCMC-658	N/A	Story	DM7 to MESH Amend existing "Convert DM7 docs" action	Connect previously has not had the ability to resend DM7 documents to MESH destination organisations. PCTI users will now have this ability by using the existing "Convert DM7 docs" button. This only applies to documents in "Received by Connect" status.
DCMC-657	N/A	Story	DM7 to MESH Amend existing action to 'resend document'	Connect previously has not had the ability to resend DM7 documents to MESH destination organisations. PCTI users will now have this ability by using the existing "Resend" button on "Errored" documents.

General changes

The following changes have been made to internal functionality:

Jira ID	Salesforce Ref	Type	Title	Description
DCMC-728	21980176	Defect	System Error - Unable to move email to Exceptions folder after the following issue: Tif Conversion Failed	Several NHS mail documents were identified in system errored status which had not been moved the NHS mail exceptions folder. This was caused by several ConnectBots running simultaneously when a conversion operation fails. Additional checks when handling conversion operation failures to account for simultaneous processing.
DCMC-250	N/A	Story	Connect Receiving FHIR - Feedback/Get message status from Fhir Service to Connect	A new function has been added to the Connectbot that updates Connect if the status is "accepted" or "rejected" in the FHIR service. This allows Connect to identify when a document has reached the destination endpoint.
DCMC-533	N/A	Story	System Errors Failed to send to Mesh	When a document errors due to failing to send to MESH a retry count has been introduced. Upon failing 3 times the error is persisted to the Central Errorlog. To help support with investigating these issues, a link to the error log is now provided.
DCMC-587	N/A	Story	Allow Connectbot Mesh Functionality to use Role Based Assumed Access in AWS	A change has been made to ConnectBot MESH functionality to use assumed access for accessing SQS.
DCMC-607	N/A	Bug	OOA Document Collections - Reject After setting	An amendment has been made to the wording of the "Reject after x days" setting found in OOA document collections. Since Connect does not reject, this has now been changed to "Error after x days".
DCMC-656	N/A	Story	System Errors Tif Conversion Failed. Error ID [XXXXXXXXX]	A change has been made to a particular system error. If a document fails due to 'Invalid PDF file format' then the document will now be rejected back to the sender with a rejection message of "Invalid PDF file".
DCMC-685	N/A	Story	FHIR end to end test	Testing story for testing full end to end process of the DMC FHIR service.
DCMC-718	Internally Raised	Defect	141 Hotfix SOAP - No Colour conversion	An issue was Identified when sending from Rio to Connect, documents were all showing in black & white even with the colour conversion setting enabled. This issue was caused by the

				colour conversion setting being configured against an API consumer. Since Rio customers do not have API consumers configured on Connect, the setting was not taking affect. A fix has now been applied to force all Rio documents through in full colour.
