Overview **1**
9.13.2 Changes **2**

Overview

EDT hub patch 9.13.2 contains a major change to security, allowing the use of TLS 1.2 with the EDT Hub product. All Hubs with sharing agreements will need this patch in order to continue sending and receiving as normal. Backward compatibility has also been configured to allow relaying from TLS 1.0 to 1.2 and vice versa.

9.13.2 Changes

This release contains the following API specific changes:

Jira ID	Salesforce / Service Now Ref	Type	Title	Description
DEDT-261	N/A	Defect	Maintenance Service not returning 4015 status	An issue was identified where documents set to 'accepted with amendments' were not being passed back to the originating Hub when the document was relayed. This was caused by the maintenance service not having any record of 4015 status (accepted with amendments). This has now been resolved and both relaying Hubs will now receive the 4015 status as expected.
DEDT-376	N/A	Task	EDT Hub TLS 1.2 Upgrade Investigation	Placeholder for an investigation task into the uplift of EDT Hub to use TLS 1.2.
DEDT-298	N/A	Change	Change EDT Hub to use TLS 1.2	A change has been made to the whole EDT hub product which allows Hub to utilise TLS 1.2. As part of this change EDT Hub can now relay to and from a Hub on 1.0 or 1.2 and vice versa. This also includes the EDT maintenance service.
DEDT-471	N/A	Change	Documents in 'Pending' (Managed Hub)	Documents were identified on the managed hub that were stuck in 'Pending' status. This was caused by a drop of network connection when sending via the API. This meant the physical document was not successfully added to the document store however a new document row was still added to the database. When reaching TIF conversion, the document would fail to convert due to the physical document not being present and the document status was set to 'Pending'. To prevent this issue from occurring and the need for manual intervention, a new process has been added to the maintenance service which finds any documents in 'Pending' status and set them to 'rejected by user' status. This process runs every hour along with the existing processes run by the maintenance service.
DEDT-482	N/A	Task	Spike - DEDT-471 - Find out how EDT hub uses status 4009 - Pending	A solution was needed for documents that were sat on pending status on Hubs. This task was created to allow time for investigation into how to prevent documents sitting in this status.
DEDT-484	N/A	Task	Fix up the Develop branch	A few issues were identified in the development branch which was stopping new patches from being created. The original changes were reverted

				which allowed the team to create the necessary patches.
