Overview

This release includes development work carried out in Sprints 144 and 145. The most notably change within this release relates to the user interface of Docman 10.

Both Docman 10 and RMS products have been given a cosmetic uplift, giving them a more modern and reinvigorated look and feel. This signifies the start of our Docman 10X work, with new functionality to be added in the future.

It also includes a new Automated Coding feature will be released to several pilot sites to trial the functionality before it is made widely available for other customers.

A new API has also been developed to provide an integration between Docman RMS and PEPR, which will allow PEPR to display any open Docman tasks and discussions for a User to complete in Docman RMS.

RMS Changes

This release contains the following RMS specific changes:

Jira ID	Salesforce / Service Now Ref	Type	Title	Description
DCMC-385	N/A	Feature	RMS – PEPR Integration API Capability to return the patient document folder a document has been added to	As part of a new feature, the Docman RMS API can expose the patient document folder a document belongs to so that PEPR can add this information to a referral when a synchronisation takes place.
DCMC-381	N/A	Feature	RMS – PEPR Integration User task count API	A new API call has been added which returns a count of active tasks for a given User. This will allow Users of PEPR to see how many Tasks they have in RMS without having to log in. A Windows username can also be checked if it is already linked to a Docman User account.
DCMC-689	N/A	Feature	RMS – PEPR Integration New data items for Patient Document API endpoint	New data items have been added to the current 'Patient Document endpoint' in the Docman 10 API so that it can return the necessary information PEPR needs for PEPR to add to a referral when pulling it in from RMS. The new data items include 'Folder name' and UBRN.
DCMC-386	N/A	Feature	RMS – PEPR Integration Task update synchronisation API	<p>A new API has been created which can tell PEPR whenever a document has been updated in RMS so that PEPR can pull in the new information for a referral accordingly. The API can be queried with an updated since date/time range and optionally a Task name and return completed Tasks with the following details:</p> <ul style="list-style-type: none"> • Document GUID • Patient ID • Task name • Task type • Task Completion Date <p>The Date/Time range must be restricted to 72 hours maximum.</p>

DCMC-382	NA	Feature	RMS – PEPR Integration Task comments API	<p>A new API call has been created to surface all Discussions and Review Task comments related to a specific document. This is so PEPR can add this information to a referral when Discussions are updated. The Document GUID can be used as the input parameter and this returns the following:</p> <ul style="list-style-type: none"> • Discussions related to the specific document, including: <ul style="list-style-type: none"> ○ Discussion comments added ○ User who added the discussion comments ○ Date/time the discussion text was added • It also includes information from finished review tasks: <ul style="list-style-type: none"> ○ Task comments added ○ Task template used ○ User who finished the task and Task completion date/time <p>If a 404 error is returned, then the document GUID is invalid.</p> <p>If a 200 response is returned then the request is valid, but no data is present.</p>
D10-5352	21955520	Defect	Actions missing from View History action	<p>Several task actions had been reported as not added to the history of a document. A fix has now been implemented by reworking how the SQL is built for document history.</p>

GP Changes

This release contains the following GP specific changes:

Jira ID	Salesforce / Service Now Ref	Type	Title	Description
D10-5146		Feature	Organisation-level feature switch for Automated Coding	To control the roll-out of this functionality, an Organisation-level feature switch had been added so that Advanced can set which Organisations can use Automated Coding.
D10-5147		Feature	Global settings to connect to the Clinithink Insight API	A global setting has been added to the Connect console so that the Clinithink API settings can be configured easily across the customer base by Cloud Ops.
D10-5193		Feature	Create Action Button for Clinithink Insight API	A "Start AI Coding" action has been added to Tasks so that Users can perform automated coding.
D10-5197		Feature	Create Independent Method for OCR document for Clinithink	A separate method in the Clinithink controller has been created to write OCR content to the database in the case where OCR content is missing for a document in Docman,
D10-5198		Feature	Create New Clinithink controller to implement Clinithink API calls	A new action method has been created in the Clinithink controller so that OCR content can be sent to the Clinithink API to provide the User with suggested clinical codes.
D10-5149		Feature	Basic Processing of AI codes	This feature will extract basic codes from the Clinithink Insight API response and provide Users with the results suggested by the AI when using Automated Coding.
D10-5263		Feature	Display AI Coding Results in UI	When actioning a Coding task using Automated Coding, Users will be presented with Snomed codes suggested by the AI to assist in the process of coding documents.
D10-5178		Feature	Ability to edit suggested term attributes	Users can amend the attributes of coded terms suggested by the AI if they wish to do so while retaining the same coding term.

D10-5179		Feature	Ability to omit suggested terms	Users can remove a suggested term from the list of codes suggested by the AI to omit it from the coding process.
D10-5180		Feature	Highlight suggested term locations in the document	By hovering of a specific term that has been suggested by the AI, the code will be highlighted within the document.
D10-5181		Feature	Identify potential duplicates in automated coding	Terms suggested by the AI are checked against the patient's medical history so that Users do not unnecessarily duplicate codes that should not be duplicated. "Get Medical History" must be enabled in Settings for this functionality to be activated.
D10-5183		Feature	Blacklist inappropriate terms	Codes that a User would not typically add to a patient document will be automatically excluded when using Automated Coding if they meet the blacklist criteria.
D10-5184		Feature	Assign EMIS term heading	When coding documents in Docman 10 and using EMIS Web, term headings will be automatically added, removing the need for the User to do it themselves manually.
D10-5188		Feature	Assign associated term values	Associated term values will automatically be added when using Automated Coding to save the User from having to set these themselves. The User can still choose to amend these values if they wish to.
D10-5296		Feature	Assign existing Problem code "Episode" using EMIS coded record check	<p>Automated Coding will check terms against the patient's medical history in EMIS and assign the appropriate "Episode" for a Problem code so that Users do not unnecessarily duplicate codes.</p> <p>Please note that this only applies if the "Allow Get Medical History" functionality is switched on in the Docman Settings console.</p>
D10-5207		Feature	Function for Advanced to manage the Automated Coding Blacklist	Advanced will be able to filter out any blacklisted terms from use in Automated Coding so that they do not appear in the suggestions list. Examples include codes such as Address and Date of Birth.

D10-5416		Feature	Remove duplicates of terms suggested by Clinithink more than once	Duplicate codes in the Automated Coding suggestions list will automatically be removed so that the User does not have to remove them.
D10-5205		Feature	Assign units from the Automated Coding response	Automated Coding will assign units to terms so that the User does not have to. This User will be able to change the unit suggested from the list of units configured for the site.
D10-5507		Feature	Add punctuation to OCR specifically for Automated Coding	Punctuation has been added to the OCR specifically for Automated Coding so that it can suggest terms based on the overall document as accurately as possible.
D10-5432		Feature	User interface enhancements for the AI coding panel	A series of enhancements were added to make the AI coding panel clear and consistent so that the workflow is easy and intuitive for Users.
D10-5500		Feature	User interface enhancements for AI coding items	The AI coding panel will show all relevant information required so that the User does not need to click into each individual term to check if it's been coded with the correct attributes.
D10-5462		Feature	Use EMIS desired format for blood pressure codes	Automated Coding will continue to send blood pressure readings in a format that EMIS web understands so that the patient record has a complete history of BP readings in one place.
D10-5596	21996991	Defect	Patient Facing Services Error when editing filing details and attempting to refile the document.	When editing the filing details of a document in a patient record and then attempting to refile the document to EMIS this resulted in an error and the document would appear visible to the patient by default. A fix has now been implemented this issue.
D10-5584		Bug	Patient Facing Services DTA closed but audit is still written	If a User sets the Online Status of a document without the Desktop App running, an action is audited despite not being executed in EMIS. This issue was found internally and has now been resolved. Users will now be notified that they cannot use the Online Services feature if the Desktop App is not running.

D10-5665		Bug	PATCHS Auto-registration Status code 2 returned for NHS number matches	When PATCHS sends an NHS number to Docman, if it contains a space Docman cannot find a patient match. Any spaces will now be trimmed when performing the look up so that Docman is able to match the correct patient even if the NHS number is initially sent with spaces.
D10-5536		Task	Update Snomed Browser with latest NHS Digital release	The Docman Snomed Browser has been updated with the latest release of Snomed terms from NHS Digital.

General changes

The following changes have been made that are non-specific to RMS or GP:

Jira ID	Salesforce / Service Now Ref	Type	Title	Description
D10-5040		Feature	Docman10 X UI	Both the Docman 10 & RMS products have been reinvigorated and re-branded with a new theme and style seen throughout the application. Users will immediately notice a change to the colour scheme and to the look and feel of existing icons and navigation bars. These changes are the first in a series of future modules to be part of Docman10X.
DCMC-834	21974995	Defect	Third Party Unable to Retrieve from Share API	A defect was raised due to a Docman Share customer not being able to retrieve documents via the Share API. After closer investigation it was noticed that a duplicate field of "FolderName" had been added to one of the API calls which in turn was causing the customer's system to fail. This duplicate of "FolderName" has now been removed and any calls made to the API should now work as expected.
DCMC-725	21945948	Defect	Failing to collect forwarded email images	When forwarding emails from an external mailbox to NHS mail, embedded images were not being captured by the ExchangeCollector. The reason for this was due to the contents being capture as html instead of converting to a base64 string. A change has now been made to the exchange collector which now converts the inline images to a base64 string and after conversion the images will now display as expected.
D10-5824	22023238	Defect	Issue with Search functions	Several areas of the application which use Search functionality were reported as not working. When using search to filter documents in the screen Capture and Filing the search functionality does not respond. When adding a clinical code at the point of filing and attempting to search for a code in the

				<p>Snomed browser the search functionality does not respond.</p> <p>When searching for a pre-defined comment to add as an instruction as the point of starting a workflow this ability to search also does not respond.</p> <p>A fix has now been implemented.</p>

GP Screenshots

D10-5146 - Organisation-level feature switch for Automated Coding

D10-5193 – Create Action Button for Clinithink Insight API

D10-5263 Display AI Coding Results in UI

The screenshot shows the Docman10X interface for patient SMITH, Fred (NHS No. 123 455 4321, Born 04-Nov-1959). A yellow banner at the top states: "A conversion is required to allow interactive coding on this document, press here to convert." The main document content includes the hospital name "Sono NHS Trust Teaching Hospital" and patient details: "Date: Thursday, March 04, 2021", "Re Patient: Mr Fred Smith", "NHS Number: 123 455 4321", "DOB: 04/11/1959", and "Address: 25 Queen Street, Bournemouth, BH50 0TC". On the right, the "AI Codes" panel lists three suggested codes: "Teaching 409073007", "Malignant melanoma 372244006", and "Malaria 61462000". A "Confirm" button is visible at the bottom of the AI Codes panel.

D10-5178 Ability to edit suggested term attributes

The screenshot shows the Docman10X interface for patient COX, Nicola (Mrs) (NHS No. 370 664 5432, Born 02-Jun-1947). A yellow banner at the top states: "Revised Document Choose a unit or select a value from the document to add the unit." The main document content includes the hospital name "Sono NHS Trust Teaching Hospital" and patient details: "Date: Friday, March 12, 2021", "Re Patient: Mr Fred Smith", "NHS Number: 123 455 4321", "DOB: 04/11/1959", and "Address: 25 Queen Street, Bournemouth, BH50 0TC". On the right, the "Add Clinical Code" panel is open, showing a dropdown menu for units with options: "cm", "kg", "tr", "mg", "mm", "gm", and "ml". The "tr" unit is currently selected.

The screenshot shows the Docman10X interface for patient SMITH, Fred (). The patient's NHS number is 123 455 4321 and they were born on 04-Nov-1959 (61y). The document title is "Sono NHS Trust Teaching Hospital" with the address "Friarwood Lane, Test Town, TE3 5ST". The date is Thursday, March 04, 2021. The patient is Mr Fred Smith, NHS Number: 123 455 4321, DOB: 04/11/1959, Address: 25 Queen Street, Bournemouth, BH50 0TC. A yellow banner at the top states: "A conversion is required to allow interactive coding on this document, press here to convert." The right-hand side shows an "Activity" panel with a "CODING: Clinical Code Now" section. It lists two codes: "Malaria" (61482000) and "Malignant melanoma" (372244006). The "Malignant melanoma" code is highlighted with a mouse cursor.

D10-5179 Ability to omit suggested terms

The screenshot shows the Docman10X interface for patient COX, Nicola (Mrs). The patient's NHS number is 370 664 5432 and they were born on 02-Jun-1947 (73y). The document title is "Department of Endocrinology". The date is 10 June 04. The patient is Mrs Minnie Mouse, Longsight Manchester. The right-hand side shows an "AI Codes" panel with a list of suggested terms. The terms "Muscle ache" (68962001) and "Hot flushes" (198436008) are highlighted with green circles. The "Muscle ache" term is also highlighted with a green box. The "Confirm" button is visible at the bottom of the panel.

D10-5180 Highlight suggested term locations in the document

The screenshot shows the Docman10X interface for a document titled 'Sono NHS Trust Teaching Hospital'. The document content includes patient details for Ms Launa Powell and a clinical note mentioning 'psoriasis'. On the right side, an 'AI Codes' panel is open, displaying a list of suggested codes. The code 'Psoriasis 9014002' is highlighted with a green box, indicating it has been identified in the document. Other codes like 'Teaching 409073007', 'Hypertensive episode 62275004', and 'Depression 35489007' are also visible.

D10-5181 Identify potential duplicates in automated coding

The screenshot shows the Docman10X interface for the same document. The 'AI Codes' panel on the right now displays a message: 'Identified 2 existing codes' with a dropdown arrow. Below this message, the codes 'Hypertensive episode 62275004' and 'Depression 35489007' are listed. The 'Hypertensive episode' code is highlighted with a green box, indicating it is a duplicate of an existing code. The document content also shows 'episode of hypertension' highlighted in the text.

Patient: Mr Fred Smith
DOB: 04/11/1959
NHS Number: 123 455 4321

Department: Endocrinology

Diagnosis: Hyperthyroidism

Dear Dr Watson

Thank you for referring Mr Smith to my clinic. As you explained in your letter his presentation was unusual as his weight has increased from 73kg to 90kg over three months but there is little doubt from the biochemistry that he has hyperthyroidism. I noted that his mother was diagnosed with pernicious anaemia when she was in her thirties and went on to get type 1 diabetes at the age of 50.

He suffered from asthma as a child but has no symptoms now despite smoking over 20 cigarettes

I saw Launa in A&E today. She's currently experiencing a new episode of hypertension. This is a concern as in the past she had a TIA.

Launa is currently diagnosed with depression though she has no past history of this. She is also experiencing the ongoing effects of psoriasis.

Yours sincerely

Re Patient: Ms Launa Powell
NHS Number: 451 906 4011
DOB: 02/08/1988
Address: 76 The Crescent, Brighton, BN80 25C

I saw Launa in A&E today. She's currently experiencing a new episode of hypertension. This is a concern as in the past she had a TIA.

Launa is currently diagnosed with depression though she has no past history of this. She is also experiencing the ongoing effects of psoriasis.

Yours sincerely

Mrs Nina Sonographer MSc., FRCS, FRCS (ORL-HNS)
Diagnostic Medical Sonographer

Treatment:

Thank you for referring this 51 year old lady to the Endocrine Clinic. She attended the surgery in May with a one year history of hot flushes, generalised muscle aches, fatigue and headaches. She says that her weight has been steady. She has also had palpitations and a tremor as well as some thinning of her hair. She denies any bowel disturbance. She does have a history of IBS. She has also noticed dryness, grittiness and watering of her eyes in addition to occasional diplopia and photophobia. She is getting some pain in the right eye and feels that the right eye is much more prominent than the left. She has a pressure sensation behind this eye.

You commenced her on Carbimazole 5mg tds since blood tests showed that she was markedly thyrotoxic with a T4 of 236 and TSH < 0.01. She does feel that her symptoms have improved a little since the treatment was commenced at the beginning of May.

She smokes 30 cigarettes a day. She does not drink any alcohol. She has four children. There is no known family history of thyroid disease but she is not in contact with all of her family.

On examination she appeared clinically toxic with a heart rate of 120bpm, warm slightly sweaty palms but no tremor. She had a small diffuse goitre palpable. There was a soft dejection systolic murmur on auscultation of the precordium. Her blood pressure was 170/90. On examination of the eyes there did seem to be some limitation of upward gaze and she experienced pain in the right eye on upward gaze. There was an obvious proptosis affecting the right eye and she had lid lag on this side. There was some diplopia on looking to the right.

I am going to refer her to Mrs Mouse Consultant Ophthalmologist, for assessment of her thyroid eye disease. I have asked her to increase the Carbimazole to 30mg daily and I would be grateful if you could alter the

D10-5205 – Assign units from the Automated Coding response

The screenshot shows the Docman10X interface with a clinical document for Mr Fred Smith. The document contains a list of clinical findings: Fred's height: 1.91m, Fred's weight: 70kg, Fred's blood iron: 75 mcg/dl, and Fred's heart rate: 170bpm. A dialog box titled 'Add Clinical Code' is open, showing a search for 'Heart rate' with the code 364075005. The 'Value' field is set to 170 and the 'Unit' dropdown is set to 'bpm'. The 'Event Date' is 07/04/2021. The 'Notes' field is empty. The 'Heading' dropdown is set to 'Examination'. The 'Confirm' and 'Cancel' buttons are visible at the bottom of the dialog.

The screenshot shows the Docman10X interface with the same clinical document for Mr Fred Smith. A dialog box titled 'Add Clinical Code' is open, showing a search for 'Weight' with the code 27113001. The 'Value' field is set to 70 and the 'Unit' dropdown is set to 'kg'. The 'Event Date' is 07/04/2021. The 'Notes' field is empty. The 'Heading' dropdown is set to 'Examination'. The 'Confirm' and 'Cancel' buttons are visible at the bottom of the dialog.
