Overview	1
API Changes	2
Console Changes	3
General changes	5

Overview

This release contains sprints 153 and 154 and includes the following:

- API change to allow console sending options when sending via the API.
- Bug and Defect fixes for console and general application issues.

Although this release may include tickets relating to FHIR, FHIR is not yet available to customers.

API Changes

This release contains the following API specific changes:

Jira ID	Salesforce Ref/Idea Ref	Type	Title	Description
DCMC-1027	N/A	Change	Console sending options available on API	<p>When posting from the Connect console, users have the option to select whether the document is inpatient or outpatient as well as the option to input an MRN number. These were not previously available when posting via the Connect REST API however these have now been added.</p> <p>Details can be found on the Connect API documentation: https://documenter.getpostman.com/view/1884319/RWEcPgHW#837df428-d047-433d-aca6-b71289075ff2</p> <p>Please note that this information is not passed to the GP practices and are only available for reporting purposes for the sending organisation.</p>

Console Changes

This release contains the following Connect Console specific changes:

Jira ID	Salesforce Ref/Idea Ref	Type	Title	Description
DCMC-619	N/A	Bug	Update and Resend API Document Warning not used in details page	When using the Update and Resend option on Connect, a warning message should appear stating that changes made to the document will not impact the original document held in the sending system. This warning was not showing when attempting to Update and Resend from the Document Details page. A fix has now been applied and the warning will now show when Update and Resend is used from any page.
DCMC-622	N/A	Bug	Download and Download & Resolve actions missing from details page	As a sending user, the Download option for Rejected documents and the Download & Resolve option on System Errored documents were not showing on the document details page. These options have now been added and is now consistent with the options provided on the documents list.
DCMC-758	N/A	Bug	Resending a document from console sometimes auto populates wrong destination org	When using the Update and Resend option on the Connect console, the destination ODS code would sometimes show as the wrong destination. This was caused by the way the results were order however a fix has now been applied and the ordering is now done by ODS code instead of the description.
DCMC-1024	N/A	Change	Download document rejection resolved	A change has been made to the console so that when a sending user uses the Download option on an individual document, the warning message stating that the document will be set to Rejection Resolved is displayed to the user.
DCMC-1056	N/A	Bug	Rejection Resolved Message Not Showing when Rejection Resolve Operation is done	A fix has been implemented so that when the Rejection Resolve option is selected, the sending user is now redirected back the documents list and the green banner at the top of the documents list is displayed telling the user the document has been set to Rejection Resolved.
DCMC-507	N/A	Bug	XPS fails to send to TPP destinations via console	Sending an XPS file through the console to a TPP destination resulted in the error:

				<p>Specified argument was out of the range of valid values.</p> <p>This error was caused by a failure when converting the document to PDF format. This has now been resolved and XPS documents can now be sent to TPP destinations as expected.</p>
DCMC-608	N/A	Bug	Document List Saved Filters - Blank Option	In the documents list saved filters drop-down list, there was a blank option which is used when the user creates a new unsaved filter. When selecting this and attempting to filter the page, the page refreshed, and the current filter remained applied. The blank option has now been hidden and is no longer selectable.
DCMC-1003	22065153	Defect	Delivery Management Dashboard	A number of slow queries were identified when attempting to load the Delivery Management Dashboard, these causes the Dashboard to hang when loaded and certain bits of data to not be retrieved. In an attempt to resolve this, the calculations of document counts have been moved into a scheduled process to aggregate the figures.
DCMC-1037	N/A	Bug	Default Sort Criteria is displayed wrong in Document Lists while logging in as PCTI user and Collecting User	When logging in as a PCTI or Collecting User, if a user accessed the Document list, the default sorting of the list is displayed incorrectly. A few sorting properties have now been amended and the sorting should now show as "Last update" descending.
DCMC-1079	N/A	Bug	System Config - Hyphen cannot be saved in SQS queue field names	In the system configuration page, hyphens could not be saved in the SQS field names. Hyphens have now been added as validate characters and can now be used in the SQS configuration fields.

General changes

The following changes have been made to internal functionality:

Jira ID	Salesforce Ref/Idea Ref	Type	Title	Description
DCMC-966	22008020	Defect	Docman Export File	An issue was raised regarding the Document list export being inconsistently formatted. A fix has now been applied so that any double quotes are consistent when the symbol '[' appears without a comma.
DCMC-726	21760102	Defect	Failed Notification does not work	Emails were found in the exceptions folder within NHS mail, however the user did not receive notifications within Docman 10. This was caused by the notification API not being used during the process of moving the email to the exceptions folder. This has now been added and notifications should now show when in Docman 10 when an email is moved to the exceptions folder.
DCMC-930	22041119	Defect	Documents stuck in TIF converting	A number of documents were found to be stuck in TIF conversion and were unable to be processed. This was caused by the out of memory exception not being handled correctly. A change has been made so that the exception is handled correctly and is persisted as expected.
DCMC-1083	22108996	Defect	Docman Connect SQL timeout sending mesh documents	SQL timeout issues were identified on 23 rd August causing a backlog of documents for MESH endpoints. This issue was caused by an unexpected change to a particular index being used in when running the SQL query. A fix was applied which forced the correct indexing and the backlog of documents started processing as normal.
