Patch Fixes Since Release v224

Release 224.13

Fix for Docman 10 sites in Wales not collecting from Connect – Release note supplied at the time of release.

Tech Updates

Remove Bootstrap script from Share Viewer

Internal reference DCMC-3956

Description

Following a recent PEN test of the Share Viewer application, a vulnerability was identified related to an outdated version of the Bootstrap JavaScript library. As the latest version of Bootstrap was not supported in the Share Viewer application, the team have removed the Bootstrap script. As the outdated Bootstrap script has been removed, the vulnerability identified by our PEN test provider can be closed.

What's New?

★ Documents not converting according to their API Consumer Configuration

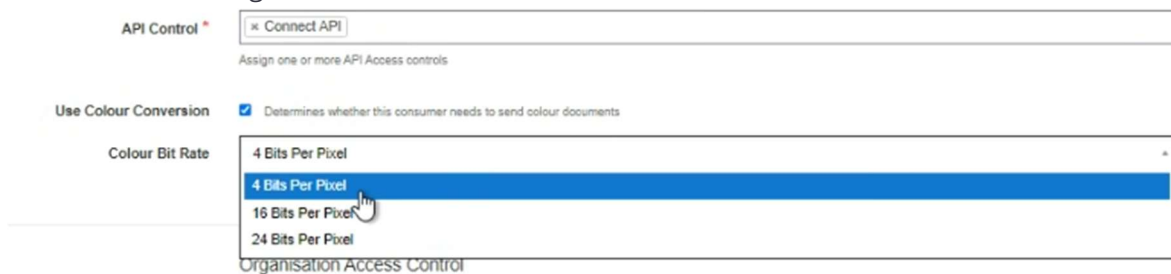

Internal reference DCMC-3458

Description

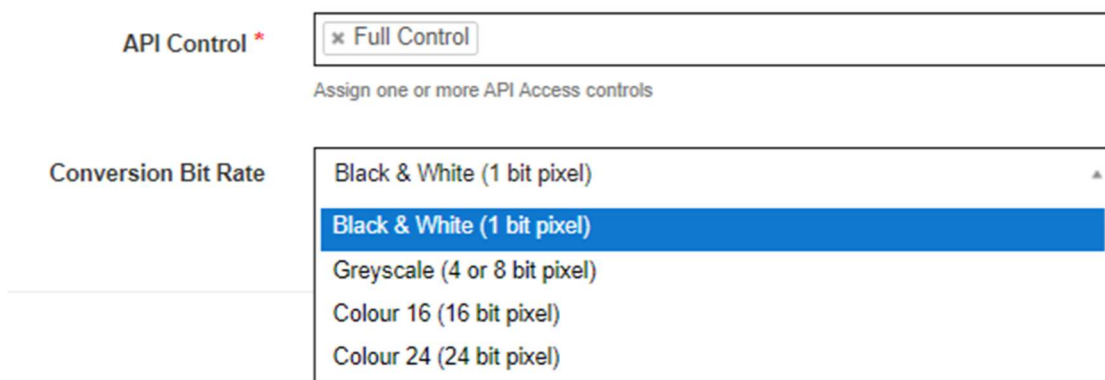

The API Consumer Configuration screen in the Connect application allows users to select whether colour documents are required and the preferred bit rate for document conversions. Docman Connect currently uses Aspose.Word and Aspose.PDF as part of the document conversion process. However, it was noted that some documents were not converting to the bit rate specified in the dropdown options on the API Consumer Configuration screen. This was contributing to the ongoing file-bloating issue as files which should have converted to 4 bits per pixel were converting to a higher bit rate (increasing the size of the converted file).

Changes have been made to the API Consumer Configuration screen to make the colour / bit rate configuration settings clearer. The document conversion bit rates have also been remapped to ensure that documents convert to the bit rate which has been selected. Please see below for the changes which have been made to the API Consumer Configuration screen.

PEN Test Enhancement - Temporary Password Timeout

Internal reference DCMC-3734

Description

Following the most recent PEN test of the Docman Connect application, our internal Application Security team made a recommendation related to temporary password expiry. Temporary passwords are currently issued to Connect users when an admin user changes their password or when an admin user sets up a new user. As soon as the user logs in using the temporary password, they are prompted to update their password.

In both instances, the temporary password will now expire thirty minutes after it has been issued. If the user attempts to login using the temporary password after it has expired, they will receive an invalid login attempt message and an admin user will have to issue a new temporary password.

Current Issues

File Size 'bloating' post conversion

Internal reference DCMC-3480

Problem

Docman Connect currently uses Aspose.Word and Aspose.PDF as part of the document conversion process. Issues around file size bloating have been reported by numerous customers and internal staff and Aspose have acknowledged there is an issue with file size bloating. The team are investigating another conversion tool which can either fully or partially replace Aspose.

Kind Regards, The Docman Connect Team

DocmanConnect

Powering the world of work

Our business software is the trusted choice for critical sectors, including healthcare, legal services, and education. We keep the world of work moving.
