What's New?

Scotland Autofiling - Update SCIGateway Connector API to get the notes on the initial Post Document reference call

Internal reference D10-12391

Description

SCI Gateway can now post a document to Docman 10x using the post document reference call with the notes included. This improvement means that a separate patch call to get the notes is no longer required.

Scotland Autofiling - Update Autofiling functionality so that we no longer use Autofiling Templates for Scotland

Internal reference D10-12392

Description

The autofiling functionality has been updated for Scotland sites so that autofiling templates are no longer used. This ensures that documents are filed to a patient record directly from the API rather than using the autofiling templates which had been previously implemented.

Scotland Autofiling - Allow the PostDocumentReference.Subject.reference to contain # symbol

Internal reference D10-12393

Description

The “#” symbol can now be supplied in the DocumentReference.Subject.reference field. Previously this symbol, which is valid syntax in FHIR specification, and is a reference to the ‘id’ in the ‘contained’ section, has returned an error.

Scotland Autofiling - Remove patient demographics check

Internal reference D10-12402

Description

The patient demographics checks have been removed for Scotland sites so that documents can be autofiled without specifying patient demographic data. This ensures that the autofiling process is kept in line with how documents are filed by Scotland sites.

Kind Regards, The Docman Connect Team
